5. Public Health

We also want to understand if the project will have any impacts on public health.

The social, economic, cultural and physical environment in which people live their lives has a significant effect on their health and wellbeing. Although genetics and personal behaviour play a strong part in determining an individual's health, good health starts where we live, where we work and learn, and where we play.

Improving public health requires taking a broader view of the conditions that create health and wellbeing, from how we plan and develop our urban spaces and places, to the opportunities for employment, recreation, and social connection available to all who live in them.

Health inequalities are the preventable, unfair and unjust differences in health status between groups, populations or individuals that arise from the unequal distribution of social, environmental and economic conditions within societies, which determine the risk of people getting ill, their ability to prevent sickness, or opportunities to take action and access treatment when ill health occurs.

Could the project have an impact on any of the following factors?

Social and Economic Yes

Physical Health No

Mental Health & Wellbeing No

Access to Services No
